

At the beginning of the course, an abacus is used to learn the techniques.

Later, children learn to do calculations in their head by forming a mental image of a number on the abacus.

Peer-reviewed studies with control groups have shown that mental arithmetic leads to:

- Increased ability to learn foreign languages
- Improved photographic memory and attention span
- The development of both sides of the brain
- Better fulfillment of intellectual and creative potential
- Greater self-confidence

THE ABAKUS EUROPE METHOD

Our centers create a welcoming atmosphere, with children enjoy learning.

We believe that gamification makes the learning process more meaningful and motivating. That's why throughout the whole course we use various educational games: board games, video and online games, physical movement, and logic and brain games. Every game has been tested by our team to be sure it meets our high standards.

Parents value our online platform, where students can complete homework and hone their skills independently.

We work with PAMA Global Abacus & Mental Arithmetic Association to ensure we provide the highest quality education.

ABAKUS EUROPE

Our teaching programme helps children to achieve excellent academic results.

Since its launch, Abakus Europe's teachers have taught thousands of students in the UK, Germany, the Czech Republic, Slovakia, Poland, and Kuwait.

WHAT IS MENTAL ARITHMETIC?

MENTAL ARITHMETIC IS A TESTED WAY of developing a child's academic abilities and creative thinking in a balanced way, allowing them to reach their full intellectual potential.

Learning mental arithmetic at a young age can have a significant impact on a child's future success, and the skills they learn remain for many years.

OUR APPROACH TO TEACHING MENTAL ARITHMETIC is fun and, most importantly, effective. Cutting-edge teaching methods combined with BrainFitness make studying mental arithmetic both interesting and valuable.

ADVANCED TECHNIQUES used during the course supports the teaching process and creates a friendly learning environment for our pupils.

OUR TEACHERS are experienced and creative, and every year they attend various training sessions and seminars to broaden qualifications.

ABAKUS EUROPE'S PUPILS consistently win prizes in international mental arithmetic competitions, which helps them to improve their self-esteem and confidence in learning new things.
